

Baler Belts

Techbelt is based in the heart of Yorkshire and is ideally positioned to provide high quality baler belts to the local and wider area farming community.

Our belts are manufactured from high quality material manufactured in the USA and will suit a wide range of baler machines such as Claas, Vicon, Massey Fergusson and Welga. These machines suit our textured top baler belts which have a heavy duty reinforcement construction in 3 ply layers. This is for added strength when continually flexing around rollers.

We can also offer, on special order, belts for John Deere Baler machines which have a diamond texture top like the OEM part and can be supplied in roll form or clipped with a mechanical fastener.

New Holland machines such as the 640 and 650 can be supplied with truly endless belts on special order by request.

When Baler belts are supplied as finished lengths or with a mechanical clipped joint, we tend to use the MATO fastener which is regarded as one of the best in the market.

As baling is seasonal, stocks tend to be much higher in the on season however if you are carrying out baler maintenance in the winter months please contact us with your requirements / size of belts as we would be only too pleased to help.

For ease of payment we have card processing facilities which means you can order your baler belts with confidence knowing payments can be made straight away therefore not holding you up should time be important.

If you have a requirement for replacement belts for your round baler, please contact Techbelt today either by phone on **01422 366386** or use our easy to use contact form for a quick response which is on this page.

Please note all our baler belts are after market products and are not sold as genuine dealer part.

ROUND BALER BELT

After Market Belts for New Holland Round Baler Machines

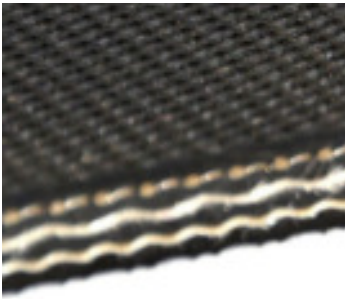

Belt Thickness (mm)	5.2	Weight (Kg/ml)	6
Top Cover Thickness (mm)	1.5	Bottom Cover Thickness (mm)	0.5
